Professional Summary

Senior Python Backend & AI Platform Engineer with 5+ years of experience building production-grade microservices, APIs, and distributed systems, and hands-on experience taking agentic AI applications from prototype to reliable production infrastructure. Skilled across the full LLMOps/AgentOps lifecycle - prompt and version management, evaluation, guardrails, observability, and deployment - backed by strong fundamentals in containerized, CI/CD-driven backend engineering. Proven track record of owning system reliability across microservices, data pipelines, and vector retrieval infrastructure. Active open-source contributor in AI observability and evaluation harnesses (FutureAGI), dedicated to shipping safe, measurable, and scalable AI platforms.

Core Technical Skills

Core Languages & APIs:	Python (Primary), JavaScript, TypeScript, RESTful APIs, Microservices, Event-Driven Architecture, WebSockets, Pydantic
Backend & Platform Engineering:	Microservices, Distributed Systems, Event-Driven Architecture, Dependency Injection, Enterprise System Integrations, gRPC
LLMOps / SLMOps / AgentOps:	Prompt & Version Management, Model Evaluation, Guardrails, Inference Optimization, Agent Orchestration, Tool Access, Memory, Observability, Rollback & Governance
AI & LLM Orchestration:	Agentic Systems, Multi-Agent Orchestration, LangGraph, LangChain, CrewAI, Multi-Step Reasoning Frameworks, Context Engineering, Model Context Protocol (MCP)
Data Engineering & Vector:	RAG Pipelines, FAISS, ChromaDB, Qdrant, Redis, PostgreSQL, MySQL
Cloud, DevOps & Deployment:	AWS (Lambda, CloudFront, Bedrock, S3), Docker, Terraform (IaC), Azure AI, CI/CD (GitHub Actions), Vercel, Git
Developer Productivity:	Claude Code, Codex, Cursor IDE, Automated Workflow Pipelines

Featured Systems & AI Solutions Engineering

Edu Claude - AI Coding Agent Platform (Claude Code-style CLI) 2026

- Built a Python-based, layered agent platform (CLI/REPL, Agent, Tools, Skills, MCP, RAG, Memory, Safety) with strict separation of concerns, using **Pydantic**-enforced structured I/O throughout, packaged and distributed via Poetry (dev) and pipx (release).
- Deep hands-on use of **LangChain** and **LangGraph**: built the RAG pipeline on LangChain, and modeled long-running, multi-step agent workflows as **DAGs** for reliable, resumable task execution.
- Built a codebase RAG pipeline using **AST-based chunking** for syntax-aware code splitting and **Qdrant** as the vector store for long-term agent memory, with automated freshness detection triggering re-indexing on codebase changes.
- Implemented core **AgentOps** infrastructure: tool-access orchestration, short/long-term memory, rollback-safe execution, and runtime observability across every agent action.
- Built the **LLMOps/SLMOps** layer covering prompt & version management, model/embedder selection, guardrails, and inference-path configuration, decoupled from business logic via a single centralized config source.
- Integrated Model Context Protocol (MCP) servers (GitHub, Jira, Slack) as agent-callable tools, and built a **governance & safety layer** plus evaluation harness (Recall@k, MRR, RAGAS, agent task success rate) for regression testing.

Production Portfolio Engine & Digital Twin Agent Click Live Demo — Nov 2025

- Built a **Python (FastAPI)** backend powering an autonomous conversational agent that answers deep-context questions on system design, technical stack, and runtime logic in real time.
- Designed async REST endpoints and request/response schemas with **Pydantic** for strict data validation and structured output, deployed as serverless functions on AWS Lambda.
- Provisioned clean, reproducible backend infrastructure using AWS Lambda and AWS Bedrock API frameworks, Azure AI, managing the cloud footprint natively via Terraform (Infrastructure as Code).
- Tech Stack: Python, FastAPI, Pydantic, React, Next.js, TypeScript, AWS Lambda, CloudFront, Bedrock, Terraform, GitHub Actions*

Delivery Management System - Order Tracking Platform 2026

- Built a **FastAPI** backend for a delivery management system with async **PostgreSQL** integration via **SQLModel**, managing schema evolution with **Alembic** migrations.

- Implemented **OAuth2/JWT** authentication covering secure signup, email verification, login, password reset, and endpoint-level access control.
- Used **Celery** with **Redis** as a message broker to run background jobs for email/SMS shipment status notifications, and wrote **pytest** test suites to cover API and background-task correctness.
- Built the client-facing UI in **React** for order creation, tracking, and status visibility.
- *Tech Stack: Python, FastAPI, SQLAlchemy, PostgreSQL, Alembic, Celery, Redis, pytest, React*

Professional Engineering Experience

Freelance

Open Source Contributor (*FutureAGI*) - AI in Production

Remote

Apr 2026 – Present

- Recommended features in AI evals and implemented it successfully. Handled edge cases in the repo and fixed it. Featured is used in production available via FutureAGI sdk to public.
- Contributing to the FutureAGI open-source platform (Python) across AI observability, evaluation workflows, and agent-facing product capabilities spanning backend services and self-hosted tooling.
- Worked with local development setup, Docker Compose-based environments, runtime configuration, and OSS delivery patterns to improve reproducibility and contributor onboarding.

Excellence Group

Software Engineer

Dubai, UAE

Jan 2023 – Sep 2025

- Owned reliability, scalability, and performance of a distributed production backend split across **microservices**, deployed via containerized CI/CD pipelines and serving **10,000+ active monthly users**.
- Maintained and extended high-performance inter-service communication layers using **gRPC protocols**, designed REST/RPC API contracts, and resolved data bottlenecks across core service endpoints.
- Programmed data aggregation APIs and worker scripts over a **MongoDB** cluster to automate complex monthly candidate analytics and operational reports.
- Enforced edge-level platform security by deploying strict Content Security Policies (CSP), executing XSS mitigations, and integrating Cloudflare Turnstile bot protection.

e-Zest Solutions

Software & Frontend Systems Engineer

Pune, India

Feb 2021 – Dec 2022

- Developed high-fidelity, reactive **D3.js engine visualizations** to evaluate, model, and map core international logic and logistical tracking parameters across 30+ countries for **UNICEF**'s regional operations hubs.
- Programmed reliable internationalization (i18n) workflows for the global **WHO** country-tier portal, directly decreasing operational edge-case data submission errors across 50+ country endpoints.

Advanced Data Science from IBM Coursera& Sabbatical

Deep Technical Upskilling & Solutions Consulting

Remote

Feb 2014 – Jan 2021

- Career break for family care, alongside a self-driven technical track mastering advanced data science engineering, high-performance logic frameworks, and system optimization scripts.
- Delivered freelance web development and localized data scripting directly to independent operators, maintaining hands-on fluency across production software design standards.

Addteq Software India Pvt. Ltd.

Software Developer

Pune, India

Dec 2012 – Feb 2014

- Wrote and maintained automation scripts via Python, Groovy, and Perl to streamline deployment steps and pipeline stability across internal enterprise task frameworks (Jira, Bitbucket).

Education & Certifications

Certification: Agentic AI Program — The School of AI

2026

Certification: Applied Data Science with Python Specialization — Coursera

2024

Degree: Bachelor of Information Technology — Savitribai Phule Pune University, India

2012

Awards & Key Achievements

- **Open Source CEO Appreciation**— Appreciated by CEO for contributing to their OSS repo and maintaining good communication while implementing features.
- **Best Performer Award** — Excellence Driving School
- **Best Performer Award** — Addteq Software India Pvt. Ltd.
- **Client Appreciation** — e-Zest Solutions for excellence in delivering UNICEF & WHO projects
- **HCL Hackathon** — Participant
- **Technical Writing** — Published AI and web development articles on Medium (medium.com/@priya.thevar89)

Personal Details

Languages: English, Hindi, Tamil, Marathi
